50 dia. PVC-U duct

## NOTES

- 1. All dimensions in millimetres
- 2. Where there is a kerb, the cover of the inspection chamber shall be set at kerb level
- 3. The feeder cables shall be laid in the inspection chamber with between 0.25m and 0.5m slack.
- 4. A paved area consisting of 1 No. 900 x 600 x 50 paving slab shall be laid immediately in front of the cabinet 600.
- 5. Maximum intrusion into filter drain is 25% of drain material within 300 of surface.
- 6. A 50 dia. hole to be drilled at 45° if duct is to be below surface. A starter hole one slot cutting wheel dia. from end of slot, a 50 dia. PVC-U duct to be inserted and plugged with alass fibre to prevent encapsulant running into PVC-U duct.
- 7. Where two part loop pit is below surface, a joint marker slab is to be provided.

- 8. Feeder grooves shall be separated by a distance of 300 in bitumen and 500 in concrete.
- 9. Loop circuits shall be identified in the cabinet by labelling the feeders in pairs with appropriate loop letters.
- 10. On concrete roads care must be taken to avoid cutting near longitudinal joints. Loops shall be cut between transverse joints in the concrete slabs.
- 11. When loops are required, concrete reinforcement shall be omitted at the design and construction stage.
- 12. Loop widths may vary to accommodate a different lane width. Refer to spec. MCE 0115

(REV.G) 13. Loop tails to be twisted together 5 turns/metre within the inspection/roadside chamber.

14. For the installation of detector loops on motorways and all purpose trunk roads refer to specification MCH 1540.

(REV.G) 15. All specifications available at www.tssplansregistry.org.

plugged with glass fibre and frame placed flush with finished surface level. before sealing Loop tails Rase Sub base 150 thick ST5 concrete Any inspection chamber to Clause 2602 provided must not intrude into filter drain LOOP PIT EMBANKMENT ONLY

NOTES

- 1. All dimensions are in metres.
- 2. All loops to be 3 turns.
- 3. Loop tails to be identified with loop reference shown using preprinted durable plastic sleeve.
- 4. This is a general drawing. Loop widths will vary according to lane widths.
- 5. Consult with detector manufacturer on frequency and channel allocation.
- 6. Quad armoured feeder cable is required for speed loops in each lane and hard shoulder.
- 7. Tolerance  $\pm 0.02$  metres unless otherwise stated.
- 8. Loop slot types S1 to S3 are shown on HCD drawing G1.
- 9. For the installation of detector loops on motorways and all purpose trunk roads refer to specification MCH 1540 available at www.tssplansregistry.org.
